

Sample Space Facts

This short document is designed for testing a PDF ingestion and evidence-retrieval pipeline. It contains clear statements that can be used as evidence for simple claims.

1. Earth and the Sun

Earth is a planet in the Solar System. Earth revolves around the Sun, completing one orbit in approximately 365.25 days. The Sun is a star at the center of the Solar System.

2. The Moon

The Moon is Earth's natural satellite. The Moon revolves around Earth. It does not revolve around Mars. The Moon's gravitational influence is a major cause of ocean tides on Earth.

3. Jupiter

Jupiter is the largest planet in the Solar System. Jupiter has a faint ring system. Its atmosphere contains bands of clouds, and the Great Red Spot is a long-lasting storm.

4. Mars

Mars is a planet with a thin atmosphere composed mostly of carbon dioxide. Mars has two small natural satellites, Phobos and Deimos.

5. Quick fact list

- Earth revolves around the Sun.
- The Sun is a star.
- The Moon revolves around Earth.
- Jupiter has a faint ring system.
- Mars has two moons: Phobos and Deimos.
